

AG Neovo Recycling Program

Greater China / Rest of the World

AG Neovo is fully supportive of the various industry efforts throughout the world to phase out the use of undesirable elements from electronic equipment and manufacturing processes. Working to comply with the EU's WEEE Directive and each nation's laws requiring participation in recycling systems, as well as planning for recycling of waste products, we aimed at minimizing the environmental impact of waste products by reducing amounts of waste electronics and electrical products, and increasing resource recycling and reuse rates. For general information about the proper disposal, contact the relevant local government department, the disposal facility or the shop where you bought the device.

Please select your country to find the certified local recyclers or the local government department to ensure the proper treatment to help you recycle AG Neovo products.

Thank you again for taking care of our environment.
